The XIS-100XDX™ is a dual-view X-Ray Inspection System (XIS) designed for screening heavy baggage at airports and cargo facilities. It is equipped with a low conveyor 30 cm (12.0") above the ground, convenient for loading and unloading freight.

For high penetration and image resolution, the XIS-100XDX is equipped with dual generators that provide operators with two separate views of scanned objects, from the top and from the side. Each view can be manipulated independently, making it easy to perform reliable and conclusive inspections. The side shooter is detachable, for easy relocation.

Combined with Astrophysics' best-in-class software, the XIS-100XDX recognizes objects, identifies materials, and isolates threats with greater speed and accuracy.

The Astrophysics XIS-100XDX is designed and assembled in the United States to the highest quality standards. For nearly twenty years, Astrophysics has led the industry in research and development, creating integrated solutions to advance the critical security missions of our customers and partners.
